

Reclamite – Surface Extension Treatment

What does it do?	Product images:
<p>Reclamite is an innovative, formulated emulsion derived from the petrochemical industry and brought to the highways industry by Roadtechs. Reclamite is the only penetrative bitumen rejuvenator with a BBA certificate in the UK. The unique formula is a cold spray emulsion which restores the chemical elements lost in the bitumen through the aging and oxidation processes. This SET solution penetrates through the voids in the asphalt surface, strengthening the aggregate bond and rejuvenating the bitumen.</p> <p>Reclamite is efficient to install and open to traffic quickly. Suitable for most asphalt surfaces, it restores the original properties of the bitumen. With no need to adjust ironworks or refresh line markings (if they are in good condition), this SET solution saves time, minimises disruption, and enables maintenance budgets to go further.</p>	 
Key technical features:	
<ul style="list-style-type: none">• Penetrative bitumen rejuvenator• Strengthens the aggregate bond and rejuvenates the bitumen• No need to adjust ironworks or refresh line markings	<ul style="list-style-type: none">• Efficient to install – reducing road closures and traffic management requirements• BBA certified
How will it help / solve issues / add value?	
<ul style="list-style-type: none">• Environmental - reducing environmental impact by over 80% - minimal mobilisation, plant & equipment requirements & no quarried aggregate• Financial - extends surface lifespan and provides whole life cost reduction of up to 40%• Safety - primarily mechanical process with minimal human interaction
